

Enhancing classroom safety in K12 schools

Onity Integra CT30 locks are a no-fuss solution for locking classroom doors. Teachers or other room leaders can use CT30 AFC* locks to quickly lock doors between a security threat and students inside the room.

PART OF YOUR SHELTER-IN-PLACE STRATEGY

Doors equipped with Integra CT30 AFC locks provide access control capability to deny free entry while allowing free exit from the room. When a security threat is announced, whether in response to an on-site peril or to a larger community hazard, teachers manually lock the door with a turn of the AFC thumb turn. Students and staff simply turn the door handle to exit the room.

LOCK DOORS WITH JUST A TOUCH

Teachers or class leaders use one motion – a twist of the thumb turn – for immediate Locked status. No precious time is wasted in fumbling for mechanical keys or setting codes. The locks can be programmed so that, when locked with the deadbolt, only specific, pre-determined credentials are accepted for entry from outside the room, helping to prevent intruders from entering. All CT30 locks meet BHMA Grade 1 product standards, the highest grade of lock performance.

QUICK DEPLOYMENTS AS PART OF AN EOP

Used in standalone mode, CT30 AFC series electronic locks are quick to install. No complex or expensive network wiring is required, yet reprogramming is easily accomplished with an Integra portable programmer. With essential door hardware in place, school administrators can focus on the more complex processes of their Emergency Operations Plans (EOPs).

COST EFFECTIVE SOLUTION FOR SCHOOLS

Integra CT30 AFC locks are easy on your budget. Quick installation of the standalone configuration, straightforward maintenance, durable hardware, and the use of four standard AA alkaline batteries that run for up to four years all make the locks even more cost effective. Modular hardware and exchangeable technologies let you augment your locks with more-advanced features when and where you want them.

*AFC: Alternative Fire Code requires that locks open from the inside with one, simple release.

Integra CT30 RFID Lock

The CT30 lock stores up to 3000 users and up to 1184 of the last events (depending on configuration), including rejections, in the audit trail in non-volatile memory.

Integra CT30 AFC Lock

The AFC thumb turn engages the deadbolt and locks a door from inside the room and permits free egress via the door handle. Locks may be set to allow only specific credentials to open the door from outside the room.

Integra Portable Programmer

Read events and program your locks with the Integra portable programmer. LEDs indicate lock status and low battery conditions.

Access management, today and tomorrow

Onity protects your investment with a built-in modular upgrade path for your facilities, as well as bringing flexibility and scalability to your operations. Pre- and post-purchase services, from project consulting to technical support, provide continued satisfaction.

Founded in 1941 as a mechanical lock manufacturer, Onity has been one of the world's leading providers of electronic locking systems for three decades. Onity also offers mobile access solutions, energy management products, and room safes.

Onity is a part of UTC Climate, Controls & Security, a unit of United Technologies Corporation, a leading provider to the aerospace and building systems industries worldwide.
